

University of Idaho 2025 PNW Spring Canola Variety Trial Summary including mean seed yield (lbs. per acre) and yield rank, seed yield (lbs. per acre) and yield rank at individual sites, stand establishment (percentage, with 100% being the best established), drought stress (visual scores on a scale of 0-5, with 0 being the least impacted), flower date (days after seeding), and plant canopy height at maturity (inches). Establishment, drought stress, and flower dates were recorded at Moscow and Genesee, and plant canopy heights were recorded in Moscow.
